

A recipe for disaster if you don't do proper planning!

- Know the environmental conditions you will be operating in during the mission
- Know your aircraft performance limits
- Make sure your crew knows and understands your performance planning numbers
- Brief performance parameters to the crew and address critical tasks associated with performance
- Rehearse the mission and define where power will be marginal during the mission

PLAN IT, BRIEF IT, REHEARSE IT
take the danger out of high, hot, and heavy
